COMPENDIVM — THE SINVS DAEMON 5FOLD ENGINE

RGBOY = COLOVRS of the V Senses: Audit Reports, Tables, Charts, Instruments, API, and the OZ ABC Witness

A Scientific Illuminist Compendium of the Fivefold Engine

Authorship attributed exclusively to Johnathan "Qasparr" Monroe (Greek, -ARR,
All Rights Reserved, Without Prejudice). XXVIII day of October, Dies Mercurii,
Sol in Scorpio, Anno V:xii e.n. (2026 e.v.).

Classification: Enterprise • Educational • Research & Development.
Method of Science, Aim of Religion.

Flagpole of Claim and Coinage: Johnathan "Qasparr" Monroe, ARR, All Rights Reserved, Without Prejudice. Right of claim hereby reserved and coined under the authority of the Living Man.

I. The Engine and Its Dictation

Dictated 2026-10-28, verbatim: *"RGBOY=COLOVRS of The V Senses, the function of the V forms of the SINVS DAEMON 5FOLD ENGINE. WITH, Who, What, When, Where, Why, and How? Assignments based on form and flow."*

The engine, in one paragraph: the five colours (Red, Green, Blue, Orange, Yellow) are the colours of the five senses; those five forms are the working forms of the SINVS (SINUS) DAEMON, a fivefold engine; and over the engine stand seven questions — WITH at the head, then Who, What, When, Where, Why, and How — assigned to the forms by form and by flow. This Compendivm is the engine's full apparatus: its audit, its tables, its charts, its instruments, its API, and its witness.

Inputs: the dictation; the PONTIFEX banks; the standing weighing order (Trinity + Cube). Processes: recomputation of every value; construction of the assignment by form and flow, tier-labeled. Outputs: this Compendivm, the toolkit sinvs.py, three charts, and the witness data. Tolerances: a value is printed only where recomputation reproduces it; a miss is printed as a miss.

II. Audit Reports

II.1 The Trinity and the Cube (PONTIFEX, recomputed 2026-10-28)

Word | Ordinal | Agrippa | Reduction | Finding

RGBOY | 67 | 539 | 67 → 13 → 4 | through the hidden center

COLOVRS | 104 | 493 | → 5 | 104 = 8 × 13

COLOURS (U-form) | 103 | 493 | → 4 | V-form Δ +1, per the standing Latin finding

SINVS | 83 | 429 | → 11 → 2 | no Cube seat alone — reported

DAEMON | 52 | 130 | → 7 | = WHAT (plain form)

SINVS DAEMON | 135 | — | → 9 | 135 = 27 × 5

ENGINE | 54 | 106 | → 9 | 54 = 27 × 2

SENSES | 81 | 320 | → 9 | 81 = 9^2

RED | 27 | 89 | → 9 | the Cube's own number

GREEN | 49 | 137 | 49 → 13 → 4 | 7^2, through the center

BLUE | 40 | 227 | → 4 |

ORANGE | 60 | 183 | → 6 |

YELLOW | 92 | 495 | → 11 → 2 | near 93, not 93 — unsmoothed

SIGHT | 63 | 214 | → 9 |

HEARING | 62 | 150 | → 8 |

SMELL | 61 | 165 | → 7 |

TASTE | 65 | 296 | → 11 → 2 |

TOUCH | 67 | 361 | 67 → 13 → 4 | = RGBOY

II.2 The interrogatives in the inscriptional (VV) form — DERIVED

Question | VV-form | Ordinal | Tie

WITH | VVITH | 81 | = SENSES — the casing weighs the whole sensorium

WHY | VVHY | 77 | = OZ

WHO | VVHO | 67 | = RGBOY = TOUCH

HOW | HOVV | 67 | = RGBOY = TOUCH

WHERE | VVHERE | 80 | = ANVBVS = Peh, the Mouth

WHAT | VVHAT | 73 | plain WHAT = 52 = DAEMON

WHEN | VVHEN | 71 | no tie found

II.3 Instrument audit

The toolkit checks itself against this audit: **self-test, 12 of 12 checks passed** (sinvs.py selftest, run 2026-10-28). The zero point of the audit, per the standing directive: agreement between PONTIFEX and the toolkit is total across the 22-word engine lexicon — the zero point was not found in that domain, and the domain is named so the statement means something.

III. Tables — the Assignment (PROPOSAL, under the author's red pen)

By form and flow. Flow of light, long wave to short: RED → ORANGE → YELLOW → GREEN → BLUE. Flow of the senses by carrier: Sight (light) → Hearing (sound)

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

→ Smell (diffusion) → Taste (dissolution) → Touch (no carrier — contact, the flow's zero point).

Sense | Colour | ~nm | Reasoning

SIGHT | RED | 700 | Flow's head; red travels farthest; the far sense takes the farthest light. RED = 27, the grid.

HEARING | ORANGE | 620 | Second in flow; sound is light's slower brother on the same air.

SMELL | YELLOW | 580 | Mid-flow; scent hangs ambient like daylight haze.

TASTE | GREEN | 530 | The living, growing world is taste's first school.

TOUCH | BLUE | 470 | Flow's end, where the carrier stops; TOUCH = 67 = RGBOY by weight.

Question | Form | Reasoning

WITH | all five | VVITH = 81 = SENSES; asked of the whole engine first.

WHY | SIGHT | VVHY = 77 = OZ; "I see" is "I know why."

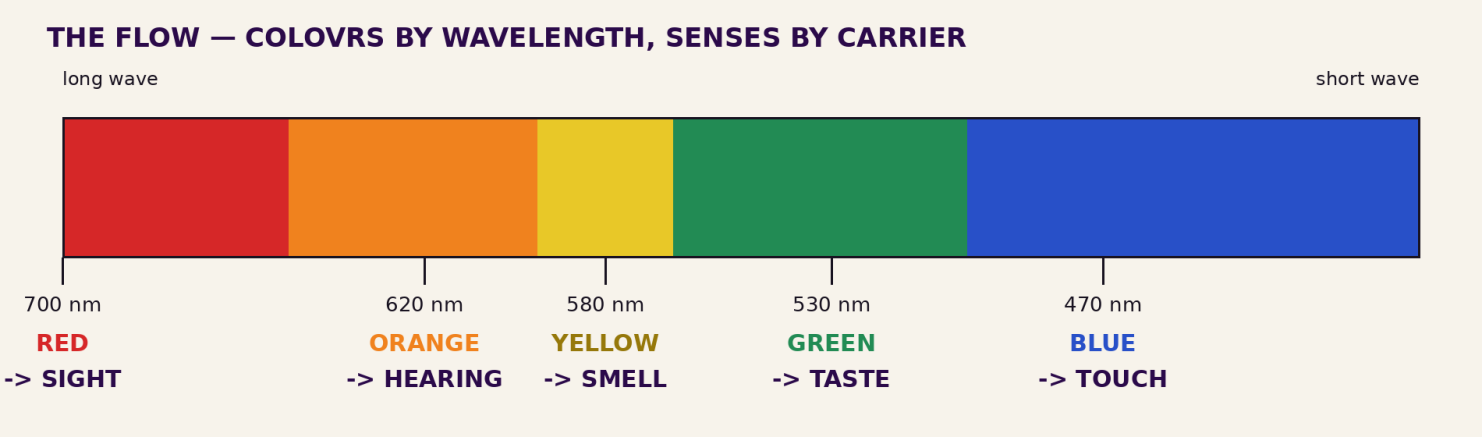

WHO, HOW | TOUCH | Both weigh 67, the set's seat; contact identifies.

WHAT | HEARING | WHAT = 52 = DAEMON; what was said is heard.

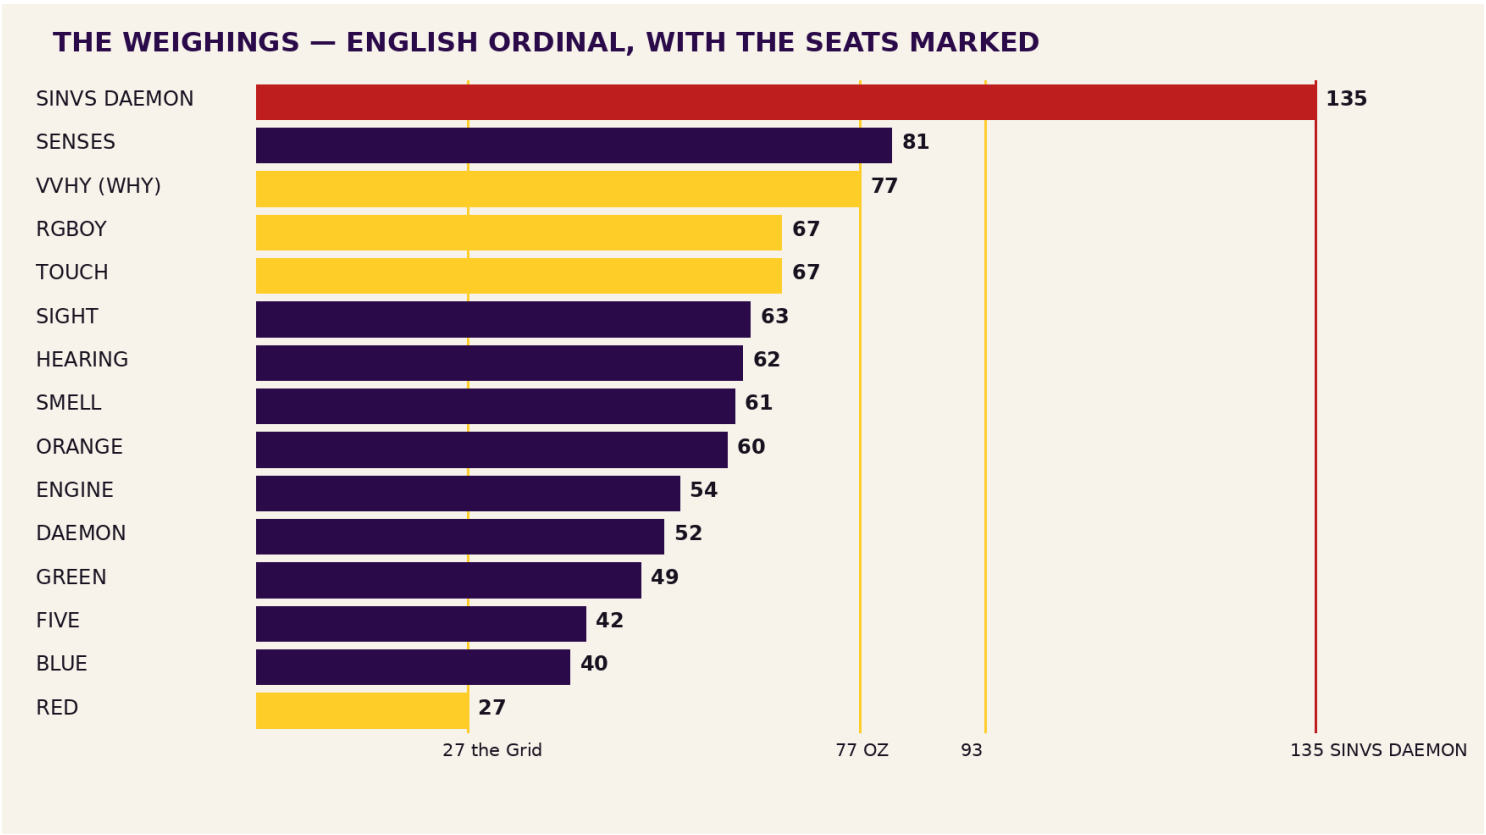

WHEN | SMELL | Scent is memory's clock.

WHERE | TASTE | VVHERE = 80 = Peh, the Mouth — the Mouth's own sense.

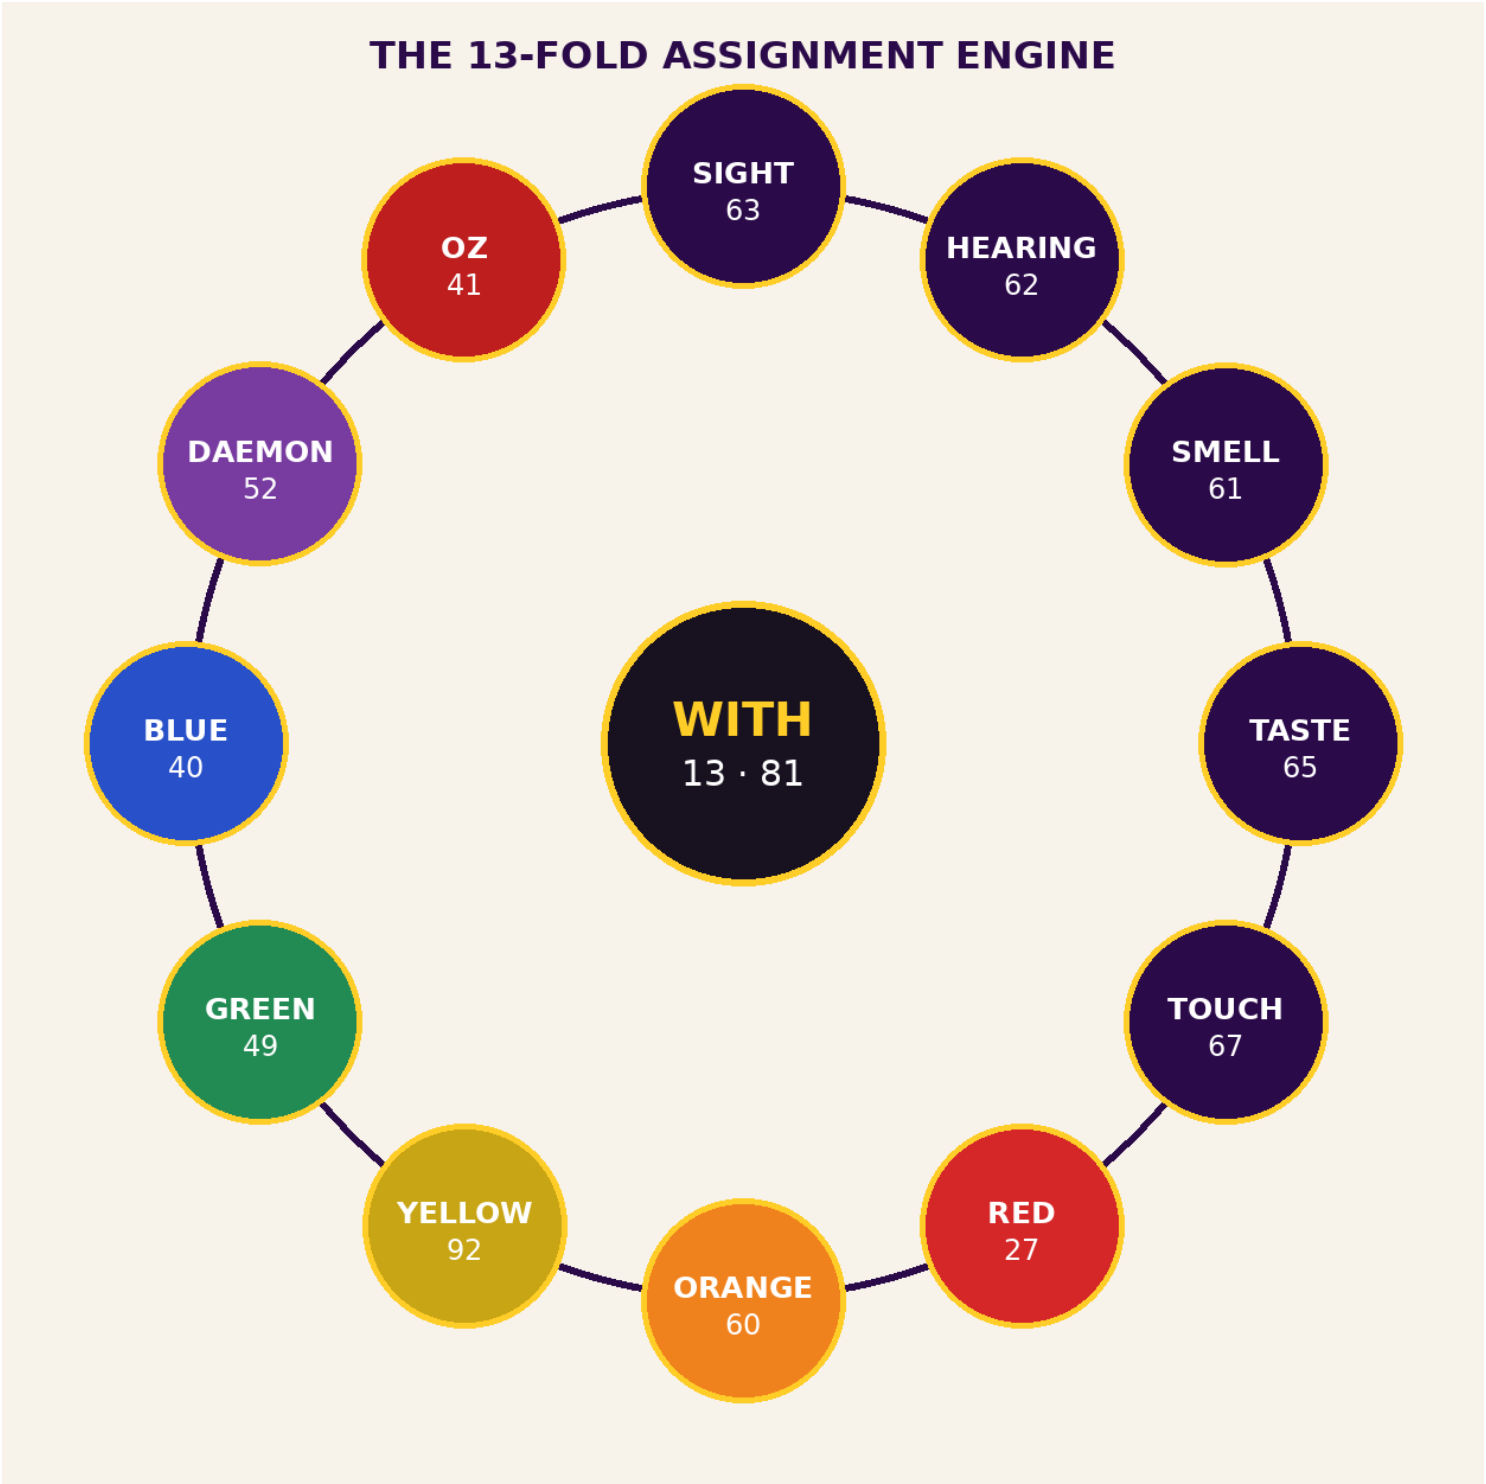

IV. Graphs and Charts

V. Diagnosis, Debugging, and Benchmark Tools

The instrument is sinvs.py — pure Python 3 standard library, no dependencies. Five instruments under one CLI:

- Diagnosis — python3 sinvs.py diagnose VVHY prints the word's Trinity, Cube path, and every canon seat it touches (VVHY: ordinal 77, seat OZ). Diagnosis is the debugging surface of the engine: any word, assignment, or

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

claimed tie can be re-derived in one command, and a word with no seat reports none — the failure is data, not an exception.

- Weighing — python3 sinvs.py weigh RGBOY (Trinity as JSON).
- Assignment — python3 sinvs.py assign (the §III tables as JSON, status field carrying the PROPOSAL marking into the data itself).
- Witness — python3 sinvs.py witness (the §VII evidence, all three renderings).
- Self-test — python3 sinvs.py selftest (12 checks against §II).
- Benchmark — python3 sinvs.py benchmark: measured on the building host, 2026-10-28: 46,000 words weighed in 0.0478 s ≈ 962,613 words/sec (checksum 3,086,000). A diagnostic figure for this machine and this run — the API documentation says so in its own docstring, because a benchmark that travels without its conditions is a claim, not a measurement.

Debugging doctrine: when a value disagrees, recompute letter by letter before believing either side — the 417 lesson of this same morning (a dropped Aleph in the auditor's own string, caught by re-weighing) is the standing example, preserved in the Tribunal audit at Qasparr/liberd.

VI. Cross-Platform API — Full Documentation

Pure functions over the standard library; identical behaviour on Windows, macOS, Linux, and Android (Termux). Import: from sinvs import weigh, trinity, cube, diagnose, assignments, benchmark, witness_abc, witness_braille, witness_13fold.

- weigh(word, bank='ordinal') -> int — sum a word in a bank ('ordinal' A=1..Z=26; 'agrippa' as shipped in PONTIFEX — W has no classical seat and contributes 0, stated in the data). Non A–Z characters are skipped.
- trinity(word) -> dict — {word, ordinal, agrippa, reduction, root}: the standing weighing order in one call.
- cube(value) -> dict — {value, path, root, through_center, mult13, mult27}: the Cube check — decade reduction, passage through the hidden center 13, multiples of 13 and of the grid 27.
- diagnose(word) -> dict — {word, trinity, cube, seats}: full diagnostic against the canon of proven seats (27, 52, 67, 77, 80, 81, 93, 135, 418).

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

- assignments() -> dict — the §III tables, with wavelengths and the PROPOSAL status in-band.
- benchmark(iterations=20000) -> dict — {words, seconds, words_per_second, checksum} over the engine lexicon.
- witness_abc() -> str — the OZ witness in ABC notation (§VII).
- witness_braille(text) -> str — Grade 1 Braille, Unicode patterns; capitals signed per letter, digit runs under one number sign.
- witness_13fold() -> dict — {center, nodes[12], status}: the 13-fold assignment engine data (§VII), also shipped as data/witness-13fold.json.

Errors: unknown bank names raise KeyError from the bank table — a loud failure by design; the engine does not guess banks.

VII. Conclusion — the OZ ABC Witness

A witness is what another sense can check. The engine therefore concludes with its witness in three renderings — for the ear, for the hand, and for the grid.

VII.1 In ABC Notation (for the ear)

The numbers of the witness — 77 (OZ), 93 (the Current), 418 (the Word) — encoded as scale degrees in C major (degree d = the d-th note of the scale; 8 = c, 9 = d′). A constructed encoding, documented so it can be checked:

```
X:1
T:OZ ABC Witness
M:4/4
L:1/4
K:C
B B d E | F C c2 |
```

VII.2 In Braille (for the hand)

The witness line — OZ 77 93 418 SINVS DAEMON 135 — in Grade 1 Braille:

⠠⠵ ⠠⠛ ⠼⠛⠛ ⠼⠊⠒ ⠼⠙⠁⠓ ⠠⠎ ⠠⠊⠝⠧⠎ ⠠⠙⠁⠑⠍⠕⠝ ⠼⠁⠓⠑

VII.3 In the 13-Fold Assignment Engine Data (for the grid)

Twelve nodes around the hidden center — the form the Expansion Chain dictated (12 around the Zero-point, the hidden 13th):

```
Node | Kind | Name | Ordinal
1 | sense | SIGHT | 63
```

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

2 | sense | HEARING | 62

3 | sense | SMELL | 61

4 | sense | TASTE | 65

5 | sense | TOUCH | 67

6 | colour | RED | 27

7 | colour | ORANGE | 60

8 | colour | YELLOW | 92

9 | colour | GREEN | 49

10 | colour | BLUE | 40

11 | engine | DAEMON | 52

12 | witness | OZ | 41

13 | zero-point | WITH | 81

The center is WITH — the question that weighs the whole sensorium (81 = SENSES) — because every assignment in this engine is asked with the senses, from inside them, and the asking is the engine's still point.

Conclusion. The fivefold engine stands as its numbers stand: SINVS DAEMON = 135 = 27 × 5 on the Cube; RGBOY = TOUCH = 67 through the hidden center; WHY weighs OZ; WITH weighs the Senses entire. What is dictated is the author's; what is measured is reproduced above; what is proposed is marked proposed and waits on his pen. That is the whole of the witness.

Table of Authorities (condensed)

The dictation of 2026-10-28 (the engine itself) • PONTIFEX ptk (the banks; the Agrippa bank as shipped) • the Expansion Chain dictation of 2026-10-28 (the 13-node form) • the standing weighing order of 2026-10-28 (Trinity + Cube) • the Zero-Point Directive of 2026-10-27 • the Tribunal audit of 2026-10-28, Qasparr/liberd (the 417 lesson) • the ABC notation standard (abcnotation) • Grade 1 Braille (Unicode Braille Patterns).

Colophon

Built 2026-10-28 at the author's order: toolkit, charts, witness data, and this Compendivm, in the sinvs-compendivm/ directory of Qasparr/persona-v. Generation note: figures and benchmark measured on the building host at build time and labeled with their conditions.

Flagpole of Claim and Coinage: Johnathan "Qasparr" Monroe, ARR, All Rights Reserved, Without Prejudice. Right of claim hereby reserved and coined under the authority of the Living Man.

93 — Live, Love, and let Love, Live.
