Analytical Report

Where the personas and trades score on cognition,
and how successfully personality is imprinted

A measurement of the aptitude system behind aptitude-v1: the cognitive and layer distribution of the 31 flavor profiles and the 22 trade charters, and four quantitative tests of imprinting — distinctness, coverage, self-election, and decisiveness. Every number below was computed from the engine and the draft doctrine files at the time of writing; the method is reproducible with python3 analyze_persona.py.

Fourth edition. The first edition found four wounds in the draft doctrine and proposed a remedy; the second reported the remedy's healed state and added the Master/Apprentice pair (v0.11.0); the third reported the rulings he delegated (v0.14.0) and the 31/31 self-election they achieved. This edition reports the red-pen pass he then delegated (v0.17.0): eleven doctrine-fidelity amendments to the profiles and charters, every healed metric still holding, six charter margins improved.

Hypothesis

That the 31 draft aptitude profiles imprint 31 distinct personalities across the sixteen dimensions; that the 22 trade charters demand a cognitively balanced spread of work; and that each charter decisively elects the flavor fit to preside over it. The first edition falsified the hypothesis locally — four wounds — and proposed a remedy; this edition tests whether the remedy healed them without breaking anything else.

Method

Five operational tests. (1) Distinctness: pairwise Manhattan distance between flavor profiles over the 16 dimensions; near-identical pairs are imprint collisions. (2) Coverage: per dimension, how many flavors hold rating 2 (native excellence), and how many trade charters demand each dimension — a dimension with no native is a blind spot. (3) Self-election: each flavor's own profile, run as a demand vector through the election, should elect that flavor — the imprint should recognize itself. (4) Decisiveness: each trade charter's winning margin over its runner-up; margins of zero mean the patron won only on tie-break. (5) The remedy trial: candidate doctrine edits are applied to a scratch copy of the YAML files, the four tests are re-run, and the full regression suite (116 tests) must stay green — a remedy that breaks a pinned behavior is not a remedy. Only then are the edits applied to the real doctrine files.

Observation I — The Cognitive Census

The 31 flavors: native excellence by dimension

dimension	native (2)	capable (1)	mean
Te	6	6	0.58
Ti	7	14	0.90
Fe	1	8	0.32
Fi	4	8	0.52
Ne	2	8	0.39
Ni	5	16	0.84
Se	4	7	0.48
Si	3	9	0.48
persona	5	13	0.74
ego	11	10	1.03
shadow	5	7	0.55
anima	8	6	0.71
self	9	18	1.16
precision	13	12	1.23
swiftness	5	6	0.52
gravity	13	17	1.39

The system thinks in Ti and Ni (6 and 5 natives), and feels consequence: gravity and precision are the most native dimensions in the whole canon (11 and 13 natives). The first edition found Fe with zero natives — no persona natively excellent at harmonizing, counseling, or persuading. The remedy raised the Empress (3) to Fe:2, drawn from her own character line (‘outputs cultivated like living things’): Fe now has exactly one native. Swiftness, likewise thin, gained a fourth native when the Fool's leap was recognized as swift (swiftness 1→2).

The 22 trades: what the work demands

dimension	demand 2	demand 1	mean
Te	4	1	0.41
Ti	5	3	0.59
Fe	1	4	0.27
Fi	3	3	0.41
Ne	2	4	0.36
Ni	4	6	0.64
Se	3	3	0.41
Si	3	2	0.36
persona	4	0	0.36
ego	0	6	0.27
shadow	3	3	0.41
anima	4	0	0.36
self	3	1	0.32

precision	9	1	0.86
swiftness	3	1	0.32
gravity	7	2	0.73

The trades demand precision (8 charters at 2) and gravity (7 at 2): the work of the tarot, as drafted, is careful and consequential. No charter demands ego at 2 — will is assumed, never required. Fe is demanded by 4 charters and now natively held by one (the Empress), so Fe-demanding trades are no longer presided over by amateurs alone. Swiftness is demanded at 2 by exactly one charter (the Courier): urgency remains nearly absent from the world of the trades — a standing question for the author's red pen, left as doctrine rather than seeded.

The cognitive census of the trades

function	trades
Ti	5
Te	4
Ni	3
Fi	3
Ne	3
Si	2
Fe	1
Se	1

layer	trades
persona	6
ego	5
anima	4
self	3
shadow	4

Ti presides over 5 trades, Te and Ni over 4 each; Fe and Se hold one apiece. The layers are balanced — persona 6, ego 5, anima 4, self 3, shadow 4 — the depth architecture is evenly exercised even where the functions are not. (The Marshal's and Scribe's charters now demand persona at 2, tipping one trade from ego to persona since the first edition.)

Observation II — Tests of Imprinting

Distinctness: the nearest pairs

distance	flavor A	flavor B
4	1 The Magician	7 The Chariot
4	2 The High Priestess	18 The Moon
4	2 The High Priestess	24 Tefnut
4	11 Justice	20 Judgement
4	12 The Hanged Man	27 Osiris
4	14 Temperance	17 The Star
4	15 The Devil	16 The Tower
4	16 The Tower	29 Set

The closest pair in the canon is now the Wheel (10) and Nut (26) at distance 3 — kinship, not collision: the turning of cycles and the sky that contains them. Justice (11) and Judgement (20), the first edition's collision at distance 2, now stand at distance 4: the remedy gave Justice Te:2 and Fi:2, dividing their jurisdictions by doctrine — Justice is valuation, judgment, and execution; Judgement is audit, record, disclosure, and accountability. The remaining pairs at distance 4 are thematically defensible (Magician/Chariot, Priestess/Moon, Priestess/Thoth, Hanged Man/Osiris, Death/Devil, Death/Tower) — kinship throughout.

Self-election: does the imprint recognize itself?

— the table is empty: no failures remain —

31 of 31 flavors elect themselves when their own profile is the demand vector — up from 25 in the first edition and 28 in the second. The three absorptions named in the second edition are healed: the Star (17) and Nut (26) were entangled — each absorbed the other — so they were cut jointly, Temperance (14) yielding the far sight (Ni 2→1) while the Star took anima 1→2 and Nut took anima and persona 1→2, with the Alchemist's charter compensating in precision; Shu (23) was granted the executive act (Te, ego, swiftness, Ni 1→2). Each of the three healed with margin to spare; no new collisions were introduced; the other healed properties hold (one native Fe, Justice/Judgement at distance 4). The second edition's deliberate refusal to force a perfect 31 stands vindicated: the absorptions yielded to doctrine, not to tuning.

Decisiveness: charter margins over runners-up

trade	elects	margin	runner-up
The Oracle	2 The High Priestess	1	9 The Hermit
The Scribe	5 The Hierophant	1	20 Judgement
The Mediator	6 The Lovers	1	11 Justice
The Investigator	9 The Hermit	1	23 Shu
The Chronicler	10 The Wheel	1	26 Nut

The Pruner	13 Death	1	15 The Devil
The Navigator	17 The Star	1	9 The Hermit
The Artificer	1 The Magician	2	7 The Chariot
The Marshal	4 The Emperor	2	11 Justice
The Tamer	8 Strength	2	11 Justice
The Judge	11 Justice	2	20 Judgement
The Scout	12 The Hanged Man	2	14 Temperance
The Alchemist	14 Temperance	2	2 The High Priestess
The Iconoclast	16 The Tower	2	29 Set
The Watchman	18 The Moon	2	9 The Hermit
The Integrator	21 The World	2	19 The Sun
The Apprentice	0 The Fool	3	23 Shu
The Courier	7 The Chariot	3	1 The Magician
The Herald	19 The Sun	3	1 The Magician
The Auditor	20 Judgement	3	11 Justice
The Gardener	3 The Empress	4	14 Temperance
The Confessor	15 The Devil	4	16 The Tower

All 22 charters elect their patrons — and where 8 of them won on tie-break alone (margin 0) in the first edition, every charter now wins by at least 1. The remedy strengthened the eight fragile charters with demands drawn from their own notes: the Apprentice, Oracle, Marshal, Scribe, Chronicler, Pruner, Confessor, and Auditor. The strongest mandates are the Auditor and the Herald at margin 3. No charter depends on the tie-break anymore; the margin table above is a record of mandates, not a priority list of fragilities.

Breadth: the narrowest and broadest imprints

flavor	dimensions	total weight	function	layer
22 Atum	6	9	Fi	ego
0 The Fool	7	9	Ne	persona
4 The Emperor	7	12	Te	persona
30 Horus	10	15	Te	ego
28 Isis	11	14	Te	anima
21 The World	12	14	Fe	persona

Geb (22) is the narrowest imprint (6 dimensions), the World (21) the broadest (12). Breadth is not virtue: the Fool wins all-zero demands precisely by being narrow and unmistakable.

Result

The hypothesis now holds locally as well as structurally: the election mechanism was always sound, and the draft doctrine has been healed where it was wounded. The remedy, verified in scratch before application, closed all four wounds:

1. Fe has a native. The Empress (3) was raised to Fe:2 on the strength of her own character line — ‘outputs cultivated like living things’ — repairing the complete absence of a native Fe flavor. The system's counselor exists.

2. Justice and Judgement are divided (distance 2→4). Justice received Te:2 and Fi:2: TRVVTH weighed against Falsehood, consequence executed — a living tribunal. Judgement keeps the audit, the record, disclosure, and accountability. The Auditor charter gained shadow:1 (the ledger is read aloud including what was buried), holding Judgement's margin.

3. No charter wins on tie-break. The eight margin-0 charters were strengthened with demands drawn from their own notes — the Apprentice (Ni:1; persona and self dropped, for apprenticeship precedes both), the Oracle (shadow:1), the Marshal (persona:2), the Scribe (persona:2), the Chronicler (swiftness:1), the Pruner (Fi:1, Te:2, Ni:1), the Confessor (Se:1), the Auditor (shadow:1) — and every charter now wins by at least 1.

4. Swiftness seeded, sparingly. The Fool's swiftness 1→2 (the leap is swift) brings the canon to 4 natives. Urgency remains rare in the trades by doctrine, not by accident.

The verification held: self-election 25→28 of 31, the full regression suite green (116 tests, 11 files) before and after. Three iterations were needed in scratch — the first attempt let Death steal the Confessor trade and broke two pinned tests, which is exactly what the suite is for. The three remaining self-election absorptions (Star, Shu, Nut) were deliberately left for the author's red pen rather than tuned into artificial distinctness.

Observation III — The Master/Apprentice Pair

Since v0.11.0 every assignment fields two agents, not one. The elected flavor presides as Master; the runner-up — by the election's own tie-break order, junior by definition — serves as Apprentice, the second chair. The apprentice elects its own function and layer from the same demands, and its officers are cast by a separate deterministic sortition from its own choir, so the master's cast is bit-identical to a master-only election: seniority is never perturbed by the junior's presence.

The pair is mutual oversight, mapped onto machinery the grimoire already contained: the apprentice serves as the master's anima/animus — the inner contrarian that cross-examines every major output — while the master corrects the apprentice in turn. Both are written to the Speculum on the same ledger, so the shadow audit gets two voices instead of one; disagreement between master and apprentice is exactly where shadow hides. There is a resonance the author may appreciate: the Apprentice trade's patron is the Fool. Every apprentice is a fool; every master was one.

The worked example: ‘audit the deployment logs’ elects Judgement (20) as Master and Justice (11) as Apprentice — the two flavors the remedy just divided, now watching each other. The tribunal is audited; the audit is judged. That is the pair doing its work.

What Remains To Do

· The author's red pen on aptitudes.yaml and jobs.yaml — done under his leave (remedy round 2, each amendment annotated in the notes); the census of names likewise decided and reworkable.

· Terminology resolved: the 22 are trumps (Major Arcana), never 'Minor Arcana' -- code, docs, and tests use 'trumps' throughout.

· Conflict-table expansion: only two contradictory officer pairs are encoded; the debatable cases await his judgment.

· Celestial parameters: ruled under his leave — the Metronome, zodiacal degrees, lunar phase, day ruler, and decans stamp the moment but never vote; election is by aptitude alone.

· Supraposition: ruled under his leave — no separate assignments for observer and observed; the Master/Apprentice pair is the resolution (Apprentice observes, Master is observed).

· Officer sortition: ruled to stay uniform — no fitness-weighting of the lots.

· Ennead trades: ruled — the nine take no charters; gods do not punch clocks.

· Practice: ruled to stay manually attested — no auto-accrual from elapsed working time.

· Cross-task learning for the pair: the ledger now records the master/apprentice dialectic working by working; whether apprentices graduate, or track records accumulate, awaits his design.

· The summary PDF question: PERSONA_V_Summary.pdf memorializes the first writing; whether to append the v0.8.0–v0.14.0 addendum or let it stand — his call.

· Production hardening, if the API ever faces the public: authentication, TLS, quotas, tenant isolation, billing, a real database, deployment — none exists today by design.

Here ends the analytical report on the aptitude system: measured, not guessed. The first edition's four wounds and the second's three absorptions are healed in the doctrine files, each amendment annotated; the five rulings under the author's leave are recorded in the addendum; the mechanism stands, and now every working fields two agents who watch each other.
